

Filter Pages:

I like how it automatically pops up the categories and products to help searching better. Ikea shows the search engine in a clean and simple way. Some of search results are showing icon images of products which help to easily visualize how the products would be.

Children's stool

FLISAT \$17.99

Product pages:

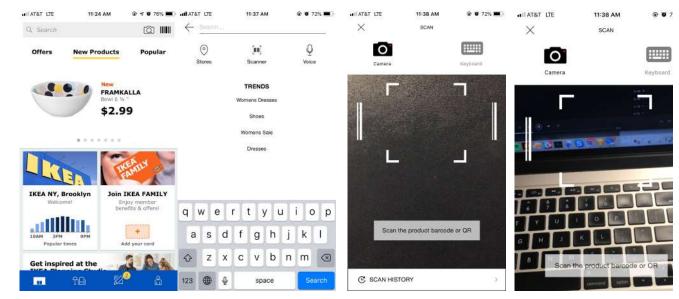

Each product detail page has various of product images, prices, add to personalized page, AR mode access, features, and product recommendation.

Contents/ Catalog Structures:

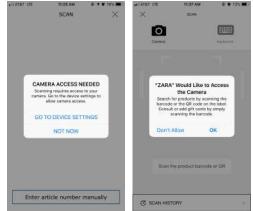

Main homescreen has each category content to enter direct page with theme photographies. There is also a direct button to browse all catalog from the home screen with filter options. Each product page has a functionality to to view in AR mode.

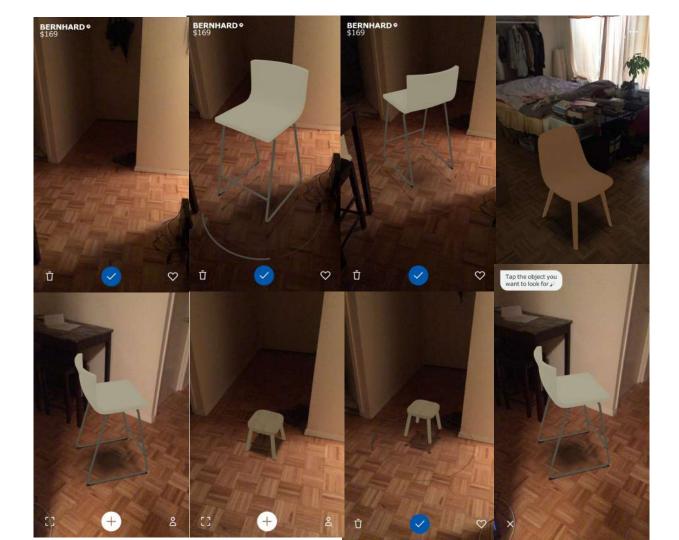

I also like small circle categories underneath search engine. This might be good for the store indications.

Search Navigation Bar:

The main search engine will be locating on the top of home screen with filter options such as by categories, stores, and by barcodes. Barcode/picture search requires a camera access permission.

AR Product Mode:

I like how Ikea place uses in their screens. It's very simple and clean CTA for AR mode. The direct access to the product pages with profile and adjustment abilities.
